

PRINTING MACHINE FOR CAPS IN SINGLE COLOUR

FEATURES

Machine suitable for printing on readymade caps.

It can be adapted to suit all cap models. Owing to the special shape of the support with spring fixture, screen printing glues are not required for blocking the cap.

The microregistrations on the printing station make adjustments extremely quick and easy.

The off-contact can be used on the Caps. It is included in the complete printing kit which consists of a small squeegee, large squeegee, five screens, a screen clamp and a printing plate in another size. Intermediate drying can be done by means of infra-red flash cure (optional).

OPTIONAL ACCESSORIES

CAP FLASH FLOOR MODEL
