

GLUE SPRAY SYSTEM FOR SCREEN-PRINTING ON FABRICS

OPTIONAL ACCESSORIES

COLLA 2207

The gun's mount can be placed in a position suitable for left-handed people.

The pressure regulators allow control of both the pump pressure and that of the spray air.

Having the glue in practical bags allows its best preservation and complete usage.

FEATURES

This cabinet contains everything needed to spray the glue correctly:

- a pump to keep the liquid under pressure and prevent the occurrence of blockages;
- the glue;
- the spray gun;
- the pressure regulators with their gauges and the bag for cleaning the equipment.

ADVANTAGES

There is a very great economic advantage! As well as an enormous advantage in terms of environmental protection! Punto Colla allows the use of "2207" low water content glue, which does not smell, is moderately volatile and is not toxic (see the toxicology sheet provided) Cleaning the gun becomes a simple matter of removing the gel deposited on the nozzle. Only if left unused for over a week does the nozzle need to be washed (using the bag provided) Punto Colla moves easily from one work position to another. It just needs a compressed air connection. Disposal costs are very low and also the space to store the supply of cans is regained. The top of the cabinet becomes a useful place to put things that need to be within hands reach, while the supply of glue bags can be kept inside. Everything becomes tidier and more efficient.

TECHNICAL SHEET

VALUES

INTAKE AIR PRESSURE (max)	6 (12) bar
AIR CONSUMPTION (max)	100 l/min
USABLE PRODUCTS	COLLA 2207
WORKING HEIGHT	780 mm
WIDTH (max)	350 mm
DEPTH (max)	360 mm
WEIGHT	15 kg
